

Smellaway — Pipe Odour Remover

For when the water drains fine but the smell comes back up.

BH0220

In short

- 300 ml, liquid
- Spores activate on contact with dirt and break it down
- Removes the cause of the smell, not just the smell
- Harmless to flora and fauna

How to use it

Shock treatment: pour in half the bottle, or all of it for stubborn odours, and leave for at least 15 to 30 minutes without running the water. Repeat the next day if needed. For upkeep: about 100 ml into the drain once a week, ideally late in the evening, and leave it overnight.

Worth knowing before you buy

- Avoid release to the environment.
- Works overnight — running water too soon washes it away before it has done anything.
